

RESIDENTIAL OPERATOR DESCRIPTIONS

When ordering an electric operator for your residential door, you see that you can choose to use your existing operator or order a new one (or none at all). Regardless of whether it's yours or a new one, we include these items to work with your operator:

Perforated Angle: 12 ga. x 8' long pieces (fasteners included). Use for suspending the horizontal track and electric opener from your ceiling.

Operator Bracket: a vertical support which is required for your door's top section when using an existing or new opener.

Strut: a horizontal support which is required for your door's top section when using an existing or new opener.

Which operator is right for you?

During the configuration process you will see several operator options from Liftmaster and Linear. Four major types of operators are available (indicated in the configurator) to select based on your needs:

Belt Drive Garage Door Openers

Offer the ultimate in quiet operation. Each delivers smooth-running power and reliable performance year after year. They are the perfect choice for homes with living space above or next to the garage.

Chain Drive Garage Door Openers

Chain driven garage door openers, which are durable, reliable, and offer lasting performance.

Screw Drive Garage Door Openers

Specially engineered to run smoothly and quietly, even in extreme temperatures. They deliver superior performance, no matter what climate you live in.

Residential Jackshaft Garage Door Opener

Mounts on the wall beside the garage door, freeing up ceiling space, and is available with an optional power standby system that continues working even when the power goes out.
